Where these figures come from

Every figure in this catalogue was read from the Angus New Zealand record for that animal on Helical. The reading was taken on 24 August 2026. The analysis date carried on those records is 7 August 2026, so a figure can move once Angus New Zealand runs the next analysis. Percentiles are against the 2024 Born Average. The code opens every Riverrock Angus animal on the register.

Lots in this catalogue

Every bull is set out over two pages. The first carries his indices, three generations of pedigree, and his photograph where one has been supplied. The second carries every estimated breeding value Angus New Zealand publishes for him, with the accuracy, the percentile and the 2024 Born Average beside each one.

Lot	Name	Ident	Born	SRI	API	HDTI	Photograph
1	Riverrock 244	21318024244	12/08/2024	\$76 Top 93%	\$117 Top 54%	\$133 Top 5%	Included
2	Riverrock 246	21318024246	25/08/2024	\$151 Top 15%	\$154 Top 21%	\$107 Top 51%	Still to come
3	Riverrock 247	21318024247	26/08/2024	\$114 Top 56%	\$121 Top 50%	\$130 Top 7%	Still to come
4	Riverrock 2410	2131802410	09/09/2024	\$125 Top 42%	\$100 Top 70%	\$96 Top 72%	Still to come
5	Riverrock 2416	2131802416	23/09/2024	\$166 Top 8%	\$151 Top 23%	\$96 Top 72%	Still to come

The photograph column says what actually exists. Where it reads still to come, no picture of that bull has been supplied yet, and his page leaves the space empty rather than showing you a different animal.

Every index figure in this table is in NZD, printed with its Angus New Zealand percentile beneath it. Top 5% means the figure sits with the 5 animals in every 100 at that end of the scale. It is a position, not a score, and which end of a scale you want depends on what you are breeding for.

How to read the figures

EBV An estimated breeding value is a prediction of what a bull passes on. It reads as a difference from the breed base, not as a measurement of the animal standing in front of you.	Accuracy How much information sits behind the figure. A figure with low accuracy can move further than one with high accuracy as more of his progeny are measured.	Percentile Where the figure sits in the reference group. Top 1% is one end of the scale and top 100% is the other. It reports a position, not a verdict.	Breed average The 2024 Born Average for the same trait, printed beside every figure as a reference point rather than as a mark to clear.
--	--	--	--

What each trait means

CE Calving ease direct
How easily his calves are born.

CED Calving ease daughters
How easily his daughters calve.

GL Gestation length
Days carried. Shorter means calves hit the ground earlier.

BW Birth weight
Weight at birth. Lighter suits heifers.

200D 200 day weight
Weight at weaning.

400D 400 day weight
Yearling weight.

600D 600 day weight
Weight at finishing age.

MTWT Mature cow weight
How big his daughters end up. Bigger cows eat more.

MILK Milk
Weaning weight his daughters add through milk.

SC Scrotal size
Linked to earlier puberty in his daughters.

DTC Days to calving
How quickly his daughters get back in calf.

DOC Docility
Temperament in the yards.

CW Carcase weight
Hot carcase weight of his progeny.

EMA Eye muscle area
Muscling through the loin.

RIB Rib fat
Fat cover at the rib.

RUMP Rump fat
Fat cover at the rump. Drives finishing ability.

RBV Retail beef yield
Saleable meat off the carcase.

IMF Intramuscular fat
Marbling. What AngusPure pays for.

BCS Body condition score
Condition his daughters hold.

HH Hip height
Frame size.

CLAWSET Claw set
Hoof shape. Feet keep a bull working.

FOOTANGLE Foot angle
Pastern angle. Feet keep a bull working.

Angus New Zealand is plain that some traits are best held in the mid range, so what you are breeding for decides which end you want. The breed average column is the 2024 Born Average, printed for reference and not as a pass mark. Accuracy says how much data sits behind the figure.

Trait		EBV Accuracy		Breed average Percentile				
Calving								
CE	Calving ease direct %	4.6	67%	1.7	Top 28%	Harder		Easier
CED	Calving ease daughters %	4.2	56%	1.3	Top 24%	Harder		Easier
GL	Gestation length days	-5.4	82%	-4.2	Top 29%	Longer		Shorter
BW	Birth weight kg	-1.6	82%	4.0	Top 1%	Heavier		Lighter
Growth								
200D	200 day weight kg	15	83%	42	Top 99%	Lighter		Heavier
400D	400 day weight kg	38	81%	79	Top 99%	Lighter		Heavier
600D	600 day weight kg	46	82%	102	Top 99%	Lighter		Heavier
Maternal								
MTWT	Mature cow weight kg	9	79%	90	Top 99%	Lighter		Heavier
MILK	Milk kg	16	74%	15	Top 39%	Lower		Higher
Fertility								
SC	Scrotal size cm	2.4	79%	2.1	Top 34%	Smaller		Bigger
DTC	Days to calving days	-7.2	50%	-4.3	Top 3%	Longer		Shorter
Temperament								
DOC	Docity %	10.3	72%	22.9	Top 92%	Less		More
Carcase								
CW	Carcase weight kg	0	71%	50	Top 99%	Lighter		Heavier
EMA	Eye muscle area sq cm	5.0	70%	3.4	Top 31%	Smaller		Bigger
RIB	Rib fat mm	5.6	71%	1.4	Top 2%	Leaner		Fatter
RUMP	Rump fat mm	5.5	71%	1.5	Top 4%	Leaner		Fatter
RBY	Retail beef yield %	0.1	64%	0.3	Top 61%	Lower		Higher
IMF	Intramuscular fat %	3.0	74%	1.1	Top 8%	Lower		Higher
Structure								
BCS	Body condition score	0.0	45%	0.0	Top 77%	Lower		Higher
HH	Hip height cm	-0.7	42%	-0.2	Top 75%	Shorter		Taller
CLAWSET	Claw set	-0.2	66%	0.0	Top 99%	Less desirable		More desirable
FOOTANGLE	Foot angle	-0.2	67%	0.0	Top 98%	Less desirable		More desirable

BVDV
Negative

Parentage
Verified against sire, dam and mating.

Genotype
Genotyped. The figures above are genomically enhanced.

Traits measured
200WT, 600WT, FAT, EMA, IMF

AM Arthrogryposis Multiplex. CA Contractural Arachnodactyly. DD Developmental Duplication. MA Mannosidosis. NH Neuropathic Hydrocephalus. NT821 Tibial Hemimelia NT821.
